A Letter to Investors

Abhishek Tiwari CBO

Do drawdowns mean you end up with negative returns?

Dear Investors and Partners,

The Indian stock market has demonstrated remarkable resilience over the years, if we look at the historical performance of the BSE Sensex and the Nifty Midcap 100 indexes. Over the years, the Indian market has witnessed many events like the dotcom bubble, 2009 financial crisis and the 2020 COVID virus induced fall.

Despite experiencing significant intra-year declines, both indices have predominantly ended with positive returns over the long term. This resilience underscores the robustness of the Indian economy and the potential for growth in its equity markets. More importantly, it shows that long term investors who remain focused on their goals eventually end up with positive results.

If you look at the calendar year returns of BSE Sensex for the last 45 years, the index has delivered positive returns in 36 out of 45 years. Even in these positive years, the index experienced intra-year declines ranging from -10% to more than -20%. For instance, in 1985, the Sensex delivered 94% return despite a -19% drawdown during the year. Similarly, in CY 2020, the index was up 16% despite a significant -38% intra-year decline.

| BSE Sensex Return | |
|---------------------|--|
| Intra Year Declines | Number of Calendar Years with Positive Returns |
| 0 to < -10% | 4 out of 36 |
| -10% to < -20% | 23 out of 36 |
| > -20% | 9 out of 36 |

CY1980-2025 YTD. As of Jan 31, 2025.

In the above table, we can see that even if the Sensex witnessed a decline of up to -10%, in 4 out of 36 years, you would have earned positive returns in those calendar years (Jan 1-Dec 31). Similarly, in the second instance, even if the intra year decline is in the range of -10% to -20%, in 23 out of 36 years, you earn a positive return. Lastly, even if the decline is more than -20% in any particular year, in 9 out of 36 years, you would have earned a positive return.

This pattern suggests that short-term market volatility should not deter long-term investors, as the market has historically recovered and delivered positive outcomes. Thus, investors should ideally not rush to pause their systematic investment plans (SIPs) because the market is trending lower. In fact, this is very advantage that investors should not miss out on. Investing when Net Asset Values (NAVs) are trending lower helps investors accumulate more units and benefit over the long run. Any decision to redeem or stop SIPs should be taken in context of your goals. If your goal is near completion, it makes sense to rejig your asset allocation.

The recent sell off trigged in the market has impacted mid and small cap indices as compared to large caps. As of February 28, the BSE Midcap Index is down by -16.91% while the Small Cap Index by down by -21.92%, over a two month period.

If we trace the history, The Nifty Midcap 100 Index of 21 years, the index has delivered positive returns for 15 years, despite intra-year declines often exceeding 10%. For example, in 2009, the index surged by 102% after a 24% drawdown, showcasing the potential for recovery and growth.

| Intra Year Declines | Number of Calendar Years with Positive Returns |
|---------------------|--|
| 0 to < -10% | 1 out of 15 |
| -10% to < -20% | 8 out of 15 |
| > -20% | 6 out of 15 |

CY2004-2025 YTD. As of Jan 31, 2025.

A Letter to Investors (Cont...)

The resilience of the Indian stock market can be attributed to several factors, including the growth of the middle class, government incentives for MSMEs, and supportive liquidity measures by the Reserve Bank of India (RBI). With inflation expected to average 4.20% and GDP growth projected at 6.7% in FY26, the economic outlook remains favourable.

While market falls can be unnerving, investors should view intra-year declines as opportunities rather than setbacks. Historical data indicates that the Indian stock market has consistently rewarded those who stay invested through cycles. This reinforces the importance of a long-term investment perspective in navigating market volatility.

In this age of information overload, investors are constantly exposed to news/data/trends about market events. Further, easy access to portfolios through smartphones encourages investors to check their portfolios often. This can nudge investors to take some action to outsmart other investors in connection with news/events. But timing the market is not an easy job for most sophisticated investors. SIP is designed to overcome this tendency of timing the market by ensuring consistent and disinclined investing. Categories like Balanced Advantage Funds and Multi Asset Funds, which are designed to take active asset allocation calls can enable you to tide over the current volatile market with ease. A golden thumb rule of deciding your equity/debt allocation can be based on the time horizon of the goal. For instance, if your goal is say seven years away, you may consider having a higher allocation to equities, depending on your risk appetite. Similarly, if you are closer to achieving your goal, it is wise to start shifting your allocation towards debt to protect your corpus from the volatility of markets. Remembering the old adage - as boring as it may sound serves investors well in the long run – "Time in the market is more important than timing the market."

Market Review Details as on February 28, 2025

Equity Market

The Market that was

The NIFTY50 recorded its fifth consecutive monthly decline in February, falling 5.9%. Mid Cap and Small Cap indices experienced sharper declines, falling 10.8% and 13.1%, respectively. Sector-wise, all sectors ended in red, with Capital Goods, PSUs and Realty declining 14.4%, 13.5% and 13.4%, respectively. The key reasons behind the market fall include (1) uncertainty about trade tariffs imposed by the U.S., (2) disappointing December-quarter earnings, (3) expensive valuations of Indian equities, and (4) record selling by FPIs.

The INR has faced consistent pressure in February, depreciating by 1% MoM and down 5.5% YoY. India 10Yr yields were flat MoM at 6.75%. FPIs sold USD 4.7 bn (until Feb' 27) of Indian equities in the secondary market, whereas DIIs bought USD 6 bn (until Feb' 28).

On the economy front, January CPI inflation decelerated to 4.3% from 5.2% in December 2024. WPI inflation for January was at 2.3% compared to 2.4% in December 2024. IIP growth in December 2024 moderated to 3.2% from 5.2% in November. Q3-FY25 GDP grew 6.2% compared to 5.6% in Q2-FY25. The merchandise trade deficit rose to USD 23 bn in January (vs. USD 21.9 bn in December 2024). The higher deficit was mainly due to a sequential decline in exports (USD 36.4 bn, -4% MoM, -2% YoY), while imports stayed steady (USD 59.4 bn, -1% MoM, 10% YoY).

Real GDP grew 6.2% in Q3-FY25, higher than 5.6% in Q2-FY25 (revised up from 5.4%) and 9.5% in Q3-FY24. According to Second Advance Estimates (SAEs), real GDP is projected to grow 6.5% in FY25, led by a three-year high growth of 7.6% in private consumption. This implies that Q4-FY25 real GDP growth would be 7.6% (vs. 8.4% in Q4-FY24). Real GDP growth for FY23 was revised up to 7.6% (from 7.0% earlier) and FY24 growth was revised up by 100 bps to 9.2%. Real GVA grew 6.2% in Q3-FY25 vs. 5.8% in Q2-FY25 and 8.0% in Q3-FY24, mainly led by a six-quarter high growth in the farm sector and resilient services sector growth, which was partly offset by subdued industrial sector growth.

Q3-FY25 was the third consecutive quarter of low single-digit earnings growth. Earnings for the NIFTY50 rose 5% YoY with the aggregate performance hit by global commodities (Metals and Oil & Gas), excluding which earnings grew by 7% YoY. Earnings growth was driven by BFSI (+11% YoY) with PSU Banks (+24% YoY) leading the gains. Technology (+9% YoY), Telecom (profit of INR 9 bn vs. a loss of INR 35 bn), Healthcare (+25% YoY), Capital Goods (+20% YoY), and Real Estate (+60% YoY) also contributed to the growth. Conversely, earnings growth was hindered by global cyclicals, such as Oil & Gas (OMC's profit declined 18% YoY), which dipped 11% YoY, along with Cement (-55% YoY), Chemicals (-12% YoY), and Consumers (-5% YoY).

Going forward

We are seeing a sharp and swift unwinding of the excesses and froth in the market which was built in FY24 and Q1-FY25. Valuations in certain pockets were factoring heightened earnings expectations, especially the cyclical portion of the market was being built for the long-term, which is seeing correction as earnings are getting normalized. We are seeing earnings cuts as well for the broader markets and hence a sharp fall where-in earnings are not measuring up to expectations. We are also seeing a period where in FPIs have been consistent sellers and there is heightened volatility due to global economic uncertainties and geopolitical tensions.

Government spends and recovery in capex, interest rate cuts, recovery in consumption post tax breaks are key factors to watch out for.

We reckon, amidst a growth slowdown, it is imperative to stick to investments that offer a structural long-term growth trajectory. Companies having good return profiles, good managements, healthy capital allocation capabilities and ability to capture the growth should be the preferred ones. We believe, India's long-term growth story is still very much intact which can be very well played through the equity markets, though avoiding pockets of overvaluation and overestimation of earnings.

Debt Market

For the debt market, February started with the Reserve Bank of India's Monetary Policy Committee (MPC) unanimously reducing the policy reporate for the first time in 5 years even as the monetary policy stance was retained at "Neutral". The MPC decision to reduce rates, while retaining the monetary stance at neutral, is aimed at striking a balance between the need to support domestic growth and the increasing external risks which have manifested through the recent INR depreciation. The MPC statement projected CPI inflation to average 4.20%, and the GDP growth at 6.70%, for FY26. This was the first monetary policy meeting of the new RBI Governor, and his statement mentioned that the Flexible Inflation Targeting (FIT) framework has served the Indian economy well over the years, stating that the average inflation has been lower post the introduction of FIT. This statement ensures the continuous support of the RBI for the FIT, in light of earlier comments by the Chief Economic Advisor (CEA) on the need to have a relook at the FIT.

CPI inflation eased to 4.30% during January, compared to market expectations

of 4.50% on back of lower food prices though the sequential momentum also came in lower. "Core inflation" remained below 4% and in light of the continuous downtrend in food prices, February's inflation is expected to be lower than 4%. WPI inflation was also lower compared to market expectations coming in at 2.31% led by lower food inflation though "core" WPI inflation inched to a sixmonth high of 1%. Trade deficit widened to USD 23 bn for January, compared to USD 21.9 bn in December 2024, as exports moderated while imports remained steady. The Q3-FY25 GDP growth came in-line with expectations at 6.20%. CSO estimates FY25 growth at 6.50%, compared to 6.4% earlier, which implies Q4-FY25 growth at 7.60%, which appears optimistic.

The aggregate savings rate remained stable at 30.70% during FY24, which was similar to the reading for FY23. While physical savings reduced marginally to 13.0%, the financial savings improved to 5.2%, driven by a rise in net assets. Government savings moderated to -0.9% as fiscal consolidation continued while the private sector savings rate

fell to 10.7%. The investment rate dropped to 31.4% (FY2023: 32.6%), largely led by moderation in corporate and household investments, even as the public sector and government investment rates improved.

RBI continued with its proactive stance on liquidity management as it doubled the size of OMO purchases and bought a total of INR 80,000 cr worth of bonds. This is on top of INR 59,000 cr worth of OMO purchases in January, bringing the total OMO purchases in 2025 to INR 1,39,000 cr. Apart from the OMO purchases, RBI has also conducted FX Buy/Sell swaps of USD 15 bn, thus infusing a total liquidity of INR 2,70,000 cr since the beginning of 2025. The benchmark 10 yr bond yield ended the month at 6.73% rising 3 bps during the month, despite the RBI conducting aggressive OMO purchases. Profit booking from banks, expectations of a shallow rate cutting cycle, and INR weakness led to yields rising and the curve steepening. The longer segment of the yield curve underperformed as yields rose by 10 bps in the 40 yr segment. During February, INR continued on its depreciation path and ended the month at 87.51 depreciating 1.02% during the month. FPI flows were positive in debt with USD 1.44 bn inflows while equity market saw FPI outflows.

Money market yields remained under pressure despite lower overnight rates on back of liquidly infusion by RBI. The 1 yr maturity CD's were trading around 7.65% and 3-month maturity CD yields were trading at 7.55% levels at month-end.

The OIS yields came down across the curve reacting to the liquidity infusion by RBI with the $1\,\mathrm{yr}$ and the $5\,\mathrm{yr}$ OIS yield coming down in tandem by $8\,\mathrm{bps}$.

Globally, US bond yields tumbled with the benchmark 10 yr bond yield lower by 33 bps ending the month at 4.21% on back of softer economic data. Central banks continued to ease monetary policy though long bond yields rose in Europe, China and Japan.

We expect another rate cut by the MPC in its April meeting and we continue to expect further steepening of the yield curve with the shorter end of the curve (4-8 yrs) outperforming the longer end of the curve. We expect the benchmark 10 yr bond yield to continue to trade in a range of 6.60% to 6.80%.

Scheme Riskometer

The risk of the scheme is very high

AMFI Tier 1 Benchmark - CRISIL Hybrid 50+50 Moderate Index The risk of the benchmark is high

Fund Details

Investment Objective: To provide capital appreciation and income distribution to the investors by dynamically managing the asset allocation between equity and fixed income using equity derivatives strategies, arbitrage opportunities and pure equity investments. The scheme seeks to reduce the volatility by diversifying the assets across equity and fixed income. However, there can be no assurance that the investment objective of the Scheme will be achieved. The Scheme does not guarantee/ indicate any returns.

ICRA has assigned the "[ICRA]A1+mfs" (pronounced as ICRA A one plus m f s) rating to the PGIM India Overnight Fund, PGIM India Liquid Fund, PGIM India Ultra Short Duration Fund and PGIM India Money Market Fund. Schemes with "[ICRA]A1mfs" rating are considered to have very strong degree of safety regarding timely receipt of payments from the investments that they have made. Modifier {"+" (plus)} can be used with the rating symbol to reflect the comparative standing within the category.

ICRA has assigned the "[ICRA] AAAmfs" (pronounced as ICRA triple A m f s) rating to the PGIM India Dynamic Bond Fund and PGIM India Corporate Bond Fund. Schemes with this rating are considered to have the highest degree of safety regarding timely receipt of payments from the investments that they have made.

The ratings should, however, not be construed as an indication of the performance of the Mutual Fund scheme or of volatility in its returns For complete rating scale and definitions please refer to ICRA's Website www.icra. in or other ICRA Rating Publications ICRA Credit Quality Rating Methodology for debt mutual fund schemes

ICRA's mutual fund rating methodology is based on evaluating the inherent credit quality of the fund's portfolio. As a measure of the credit quality of a debt fund's assets, ICRA uses the concept of "credit scores".

These scores are based on ICRA's estimates of credit risk associated with each exposure of the portfolio taking into account its maturity. To quantify the credit risk scores, ICRA uses its database of historical default rates for various rating categories for various maturity buckets. The credit risk ratings incorporate ICRA's assessment of a debt fund's published investment objectives and policies, its management characteristics, and the creditworthiness of its investment portfolio. ICRA reviews relevant fund information on an ongoing basis to support its published rating opinions. If the portfolio credit score meets the benchmark of the assigned rating during the review, the rating is retained. In an event that the benchmark credit score is breached, ICRA gives a month's time to the debt fund manager to bring the portfolio credit score within the benchmark credit score. If the debt fund manager is able to reduce the portfolio credit score within the benchmark credit score, the rating is retained. If the portfolio still continues to breach the benchmark credit score, the rating is revised to reflect the change in credit quality.

The fund offers flexible and convenient Systematic Investment Plan (SIP) facility. To illustrate the advantages of SIP investments, this is how your investments would have grown if you had invested ₹ 10,000 on the 1st Business day of every month over a period of time

[^]Benchmark. The above performance is for Regular Plan - Growth Option. Different plans have a different expense structure. Past performance may or may not be sustained in future and should not be used as a basis for comparison with other investments.

How to read the Factsheet

Fund Manager:

An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription:

This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount:

This is the minimum investment amount for an existing investor in a mutual fund scheme.

Yield to Maturity:

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

SIP.

SIP or systematic investment plan works on the principle of making periodic investment of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs. 500 every 15th of the month in an equity fund for a period of three years.

NAV

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Benchmark:

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10- year Gsec.

Entry Load

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/

Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV (as on 29 Nov 2024) is Rs. 100 and the entry load is 1%, the investor will enter the fund at Rs. 101.

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.

Exit load:

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV (as on 29 Nov 2024) at the time of redemption. For instance, if the NAV is Rs. 100 and the exit load is 1%, the redemption price would be Rs. 99 per unit.

Modified Duration

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Macaulay Duration:

The Macaulay duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price.

Standard Deviation

Standard Deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, its means its range of performance is wide, implying greater volatility.

Sharpe Ratio

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta

Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AHM

AUM or assets under management refers to the recent/ updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holding:

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/ securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile:

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Portfolio Turnover

Portfolio Turnover is a measure of how frequently assets within a fund are bought and sold by the managers.

R-Squared:

R-Squared is a statistical measure that represents the percentage of a fund or security's movements that can be explained by movements in a benchmark index.

Average Maturity:

In a mutual fund containing debt securities, Average Maturity is the average amount of time until the debt securities mature.

Portfolio Yield:

Portfolio Yield is computed by determining the cash flows for the portfolio and determining the interest rate that will make the present value of the cash flows equal to the market value of the portfolio.

Total Expense Ratio:

Weighted Average i.e. Total Expense of the month / average Asset / number of days in month* days in a year.
