

# PGIM India Dynamic Bond Fund

Dynamic Bond Fund - An open ended dynamic debt scheme investing across duration. A relatively high interest rate risk and relatively low credit risk scheme.

Rated AAAMfs by ICRA##

March 2026

## Why invest in PGIM India Dynamic Bond Fund?

- PGIM India Dynamic Bond Fund is rated as [ICRA] AAAMfs, denoting the highest level of safety regarding timely receipt of payments from the investments the scheme has made.
- PGIM India Dynamic Bond Fund is an actively managed duration fund. The Fund seeks to generate Alpha by taking calls based on active duration / interest rates or on spreads between the curves (that is, the AAA and Government securities) or on the shape of the yield curve.

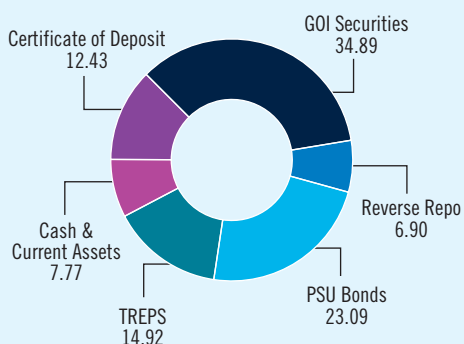

## Portfolio Positioning\*

- The Fund typically invests predominantly in Government Securities and AAA rated High Quality PSU / Corporate Bonds. The Fund is an actively managed duration fund.

## Who should invest?

PGIM India Dynamic Bond Fund is meant for investors who are averse to holding credit risk but who have an appetite to handle volatility arising from duration risk in the portfolio. Ideal for investors with a horizon of 36 months and longer.

This scheme has exposure to floating rate instruments and / or interest rate derivatives. The duration of these instruments is linked to the interest rate reset period. The interest rate risk in a floating rate instrument or in a fixed rate instrument hedged with derivatives is likely to be lesser than that in an equivalent maturity fixed rate instrument. Under some market circumstances the volatility may be of an order greater than what may ordinarily be expected considering only its duration. Hence investors are recommended to consider the unadjusted portfolio maturity of the scheme as well and exercise adequate due diligence when deciding to make their investments

All the above data are as on March 31, 2026.

\* These are based on fund manager's current outlook & Subject to change.

## Fund Manager's View

- The last month of the financial year proved to be the most eventful month over the last few years as geo political issues took centre stage, roiling markets across the globe and across asset classes. As the war in Middle East extended beyond initial expectations, INR and Indian markets came under increasing pressure owing to the Indian economy's energy dependency. INR weakened to an all-time low against the USD crossing 95, before a minor pullback, closing the month at 94.83.
- In consonance with the move in INR, there was selloff across the curve in bonds as well with the benchmark 10yr bond yield up 37 bps in the month. There was simply no appetite for buying bonds in the market in spite of RBI conducting OMO purchases of INR 1.76 lac crore during the month. In FY26, RBI has bought INR 8.77 lac crore worth of bonds in OMO purchases and despite such huge support bond yields have continued to trend higher since July of 2025. SDL supply has put pressure along with elevated credit deposit ratio of the banking system.
- The banking system deposits showed a growth of 10.80% during the year while banking credit grew at 13.80% in FY26. Money market yields also rose 30-40 bps across the curve with the 1yr maturity CD yield trading in the vicinity of 7.25% and 3 month maturity CD getting traded at a yield of 7.60%. Overall, the bond market sentiments remain pretty weak. Earlier in the month, CPI inflation came in at 3.21%, in line with expectations on back of higher fuel prices with "core" Inflation remaining benign at 3.40%. Given the sharp surge in crude oil and fertilizer prices, the duration of the Middle East conflict will have a direct impact on Inflation and economic growth for FY27. Commercial LPG prices have already been increased twice while the excise duties on petrol and diesel have been reduced to cushion the impact on oil marketing companies. Overall, the Inflation outlook has worsened and the outlook on growth has become muddled. The duration of the conflict and the sustainability of the elevated crude oil prices will have a direct bearing on Inflation.
- RBI has taken administrative steps to support INR, which can help in the short term but INR remains the worst performer in Asia and among emerging markets, having depreciated ~11% in FY26. FPI outflows continued, with USD 12.68 bn flowing out of equity markets in March, while debt outflows stood at USD 1.74 bn. RBI's short position in the forwards market is believed to have gone up substantially near to USD 100 bn and there are some concerns around macroeconomic stability.
- The OIS curve has risen sharply with the 5yr OIS trading at 6.78%, up 79 bps during the month and 1 yr OIS up 77 bps during the month. The OIS curve is pricing in 125 bps of rate hikes in the year ahead.
- Globally, bond yields hardened by 30–60 bps, reflecting a worsening inflation outlook.
- The duration and the extent of the Middle East conflict will be a key determinant of the Inflation and the growth outlook for FY27. Though the Inflation outlook has worsened markedly, we do not expect a rate hike by the MPC in next week's policy meeting as the current lower Inflation buys some time for the MPC to wait and gauge the impact of the rapidly evolving situation. We expect RBI to sound hawkish with a decent probability of a change in the monetary policy stance, signalling the end of the rate cutting cycle.

## Key Features

**Benchmark index:**  
CRISIL Dynamic Bond A-III Index

**Fund Manager:**  
Mr. Puneet Pal and Mr. Akhil Dhar

**Exit load:** Nil

## Potential Risk Class

Credit Risk →	Relatively Low (Class A)	Moderate (Class B)	Relatively High (Class C)
Interest Rate Risk ↓			
Relatively Low (Class I)			
Moderate (Class II)			
Relatively High (Class III)	<b>A-III</b>		

**Macaulay Duration:** The Macaulay duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price.

**Modified Duration:** Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

##ICRA has assigned the "[ICRA] AAAMfs" (pronounced as ICRA triple A m f s) rating to the PGIM India Dynamic Bond Fund. Schemes with this rating are considered to have the highest degree of safety regarding timely receipt of payments from the investments that they have made. The ratings should, however, not be construed as an indication of the performance of the Mutual Fund scheme or of volatility in its returns. For complete rating scale and definitions please refer to ICRA's Website [www.icra.in](http://www.icra.in) or other ICRA Rating Publications ICRA Credit Quality Rating Methodology for debt mutual fund schemes. ICRA's mutual fund rating methodology is based on evaluating the inherent credit quality of the fund's portfolio. As a measure of the credit quality of a debt fund's assets, ICRA uses the concept of "credit scores". These scores are based on ICRA's estimates of credit risk associated with each exposure of the portfolio taking into account its maturity. To quantify the credit risk scores, ICRA uses its database of historical default rates for various rating categories for various maturity buckets. The credit risk ratings incorporate ICRA's assessment of a debt fund's published investment objectives and policies, its management characteristics, and the creditworthiness of its investment portfolio. ICRA reviews relevant fund information on an ongoing basis to support its published rating opinions. If the portfolio credit score meets the benchmark of the assigned rating during the review, the rating is retained. In an event that the benchmark credit score is breached, ICRA gives a month's time to the debt fund manager to bring the portfolio credit score within the benchmark credit score. If the debt fund manager is able to reduce the portfolio credit score within the benchmark credit score, the rating is retained. If the portfolio still continues to breach the benchmark credit score, the rating is revised to reflect the change in credit quality.
