C. WHAT ARE THE INVESTMENT STRATEGIES?

The Fund will actively manage a diversified portfolio of strong growth companies with sustainable business models. Since investing requires disciplined risk management, the AMC would incorporate safeguards seeking to control risks in the portfolio construction process. Risk is also expected to be reduced through diversification of the portfolio, which the AMC aims to achieve by spreading the investments over a range of industries, sectors and market capitalizations.

The Investment Manager will select equity securities on a top-down and bottom-up, stock-by-stock basis, with consideration given to price-to-earnings, price-to-book, and price-to-sales ratios, as well as growth, margins, asset returns, and cash flows, amongst others. The Investment Manager will use a disciplined quantitative analysis of financial operating statistics. In selecting individual investment opportunities for the portfolio, the Investment Manager will conduct in-house research in order to identify various investment opportunities. The company-wise analysis will focus, amongst others, on the historical and current financial condition of the company, potential value creation/unlocking of value and its impact on earnings growth, capital structure, business prospects, policy environment, strength of management, responsiveness to business conditions, product profile, brand equity, market share, competitive edge, research, technological know-how and transparency in corporate governance.

Risk Control

Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process.

The risk control process involves reducing risks through portfolio diversification, taking care however not to dilute returns in the process. The AMC believes that this diversification would help achieve the desired level of consistency in returns. Stock specific risk will be minimized by investing only in those companies that have been analyzed by the Investment Team at the AMC. For investments in debt securities, the AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, rigorous and in-depth credit evaluation of the securities proposed to be invested in, will be carried out by the investment team of the AMC. Rated Debt instruments in which the Scheme invests will be of investment grade as rated by a credit rating agency. The AMC will be guided but not limited by the ratings of Rating Agencies such as CRISIL, CARE, ICRA and Fitch or any other rating agencies that may be registered with SEBI from time to time. In case a debt instrument is not rated, investment will be in accordance with Guidelines approved by the Board. Further, all investments in the unrated paper are periodically reviewed by Investment Committee and the Board of AMC & Trustee Company.

The Scheme may also use various derivatives and hedging products from time to time, as would be available and permitted by SEBI, in an attempt to protect the value of the portfolio and enhance Unitholders' interest.

Portfolio Turnover

The Scheme is an open-ended scheme. It is expected that there would be a number of subscriptions and redemptions (after the lock-in period) on a daily basis. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

Benchmark (Total Returns Index): NIFTY 500 TRI. As required under paragraph 1.9 of SEBI Master Circular for Mutual Funds, the benchmark has been selected from amongst those notified by AMFI as the first tier benchmark to be adopted by mutual funds and which are reflective of the category of the scheme.

The NIFTY 500 index represents top 500 companies selected based on full market capitalization from the eligible universe. The Scheme intends to invest in a portfolio of equity instruments diversified across market capitalisations which is best captured by the NIFTY 500 Index. Hence, it is an appropriate benchmark for the Scheme. The Total Return (TR) Version of the Index will be used for performance comparison.

The Trustee/AMC reserves the right to change the benchmark for evaluating the performance of the Scheme from time to time, in conformity with the investment objective of the Scheme and the appropriateness of the benchmark, subject to SEBI guidelines and other prevalent guidelines.

Part III- OTHER DETAILS
A. COMPUTATION OF NAV

NAV of Units under the Scheme will be calculated by following method:

NAV (Rs.) =	Market or Fair Value of Scheme's investments + Current Assets - Current Liabilities and Provisions
	No. of Units outstanding under the Scheme

The NAV shall be calculated up to two decimal places. However the AMC reserves the right to declare the NAVs up to additional decimal places as it deems appropriate. Separate NAV will be calculated and disclosed for each Plan/Option. The AMC will calculate and disclose the NAV of the Scheme on all the Business Days.

The valuation of the Scheme’s assets and computation of the Scheme’s NAV shall be subject to audit on an annual basis and such regulations as may be prescribed by SEBI from time to time.

The numerical illustration of the above method is provided below:

Market or Fair Value of Scheme’s investment (Rs.) = 1,15,12,05,600.00
 Current Assets (Rs.) = 60,00,000.00
 Current Liabilities (Rs.) = 40,00,000.00
 No of units Outstanding under the scheme = 10,00,00,000

$$\text{NAV Per Unit (Rs.)} = \frac{115,12,05,600 + 60,00,000 - 40,00,000}{10,00,00,000} = 11.53$$

The aforesaid provision pertaining to “ Calculation of NAV” shall apply in respect of each individual scheme and / or plan as the case may be. The NAV per unit above is rounded off to two decimals

The NAV will be calculated as of the close of every Business Day.

Methodology for calculation of sale and re-purchase price of the units of mutual fund scheme:

<p>Ongoing price for subscription (purchase)/ switch-in (from other Schemes of the Mutual Fund) by investors.</p> <p>This is the price you need to pay for purchase /switch-in.</p>	<p>At the applicable NAV.</p> <p>Ongoing Price for subscription = Applicable NAV*(1+ Entry Load, (if any))</p> <p>Example:</p> <p>If the Applicable NAV is Rs.10, Entry Load is nil then sales price will be</p> <p>= Rs. 10* (1+0)</p> <p>= Rs. 10</p>
<p>Ongoing price for redemption (sale) /switch outs (to other schemes of the Mutual Fund) by investors.</p> <p>This is the price you will receive for redemptions/switch outs.</p>	<p>At the applicable NAV, subject to prevailing exit load.</p> <p>Redemption Price = Applicable NAV*(1- Exit Load, (if any))</p> <p>Example:</p> <p>If the Applicable NAV is Rs.10, Exit Load is 1% then redemption price will be</p> <p>= Rs. 10* (1-0.01)</p> <p>= Rs. 9.90</p>

The Redemption Price will not be lower than 97% of the NAV or as permitted / prescribed under the SEBI Regulations from time to time.

For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. Kindly refer SAI.

Actual returns on your investment may be more, or less. The expenses of the Direct Plan under the Scheme will be lower to the extent of distribution expenses/commission. The NAVs published by the AMC are net of scheme expenses and they reflect return on investment to investors, provided investment is not subject to exit load. Any tax impact has not been considered in the above example, in view of the individual nature of the tax implications. Each investor is advised to consult his or her own financial advisor.

D. LOAD STRUCTURE

Exit Load is an amount which is paid by the investor to redeem the units from the scheme. Load amounts are variable and are subject to change from time to time.

Type of Load	Load chargeable (as % age of NAV)
Exit	NIL. However, the scheme has lock-in of three years.

The entire exit load (net of Goods and Services Tax), charged, if any, shall be credited to the Scheme.

The AMC/Trustee reserves the right to change / modify the Load structure of the Scheme, subject to maximum limits as prescribed under the Regulations.

Exit Load for switches within the Scheme:

- Where the investments are routed through a distributor (i.e. made with distributor code) any Switch of Units from the Regular Plan to Direct Plan shall not be subject to applicable exit load; However, after the switch, exit load prevailing on the date of the switch shall apply for subsequent redemption from the Direct Plan.
- Where investments are made directly i.e. without any distributor code, exit load will not be levied on switch of Units from Regular Plan to Direct Plan. In such cases, after the switch, exit load prevailing on the date of the switch shall apply for subsequent redemption from Direct Plan, if any;
- No exit load shall be levied in case of switch of Units from Direct Plan to Regular Plan. However, after the switch, exit load prevailing on the date of the switch shall apply for subsequent redemption from the Regular Plan.

The Switches would be done at the Applicable NAV based prices and the difference between the NAVs of the two Plans/Options will be reflected in the number of units allotted.

Load exemptions:

- a) No Exit Load will be charged on issue of bonus units and units allotted on reinvestment of IDCW for existing as well as prospective investors

Any change in the load structure shall be applicable on prospective investments only. For any change in load structure, the AMC will issue an addendum and display it on its Website (<https://www.pgimindia.com/mutual-funds>) and Investor Service Centers. B. Risk Factors

i. Standard Risk Factors:

For Standard Risk Factors, kindly refer Statement of Additional Information (SAI)

ii. Scheme Specific Risk Factors

Some of the Scheme specific risk factors include, but not limited, to the following:-

1. Risks associated with investments in Equities

- Equity and equity related securities may be volatile and hence are prone to price fluctuations on a daily basis. The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme portfolio. Also, the value of the Scheme investments may be affected by interest rates, currency exchange rates, changes in law / policies of the government, taxation laws and political, economic or other developments which may have an adverse bearing on individual securities, a specific sector or all sectors.
- Investments in equity and equity related securities involve a degree of risk and investors should not invest in the equity Schemes unless they can afford to take the risk of losing their investment.
- The investments under the Scheme will be concentrated in the Mid Cap segment and hence may perform differently than a broad market portfolio. Mid Cap & small cap stocks are generally more volatile and less liquid as compared to Large Cap stocks. Further Schemes' performance may differ from the benchmark index to the extent of the investments held in the non midcap equities/debt segment, as per the investment pattern indicated under normal circumstances.

2. Risk associated with investing in Fixed Income Securities

- **Interest Rate Risk:** Market value of fixed income securities is generally inversely related to interest rate movement. Accordingly, value of portfolio of the scheme may fall if the market interest rate rise and may appreciate when the market interest rate comes down.
- **Credit Risk:** - This is risk associated with default on interest and /or principal amounts by issuers of fixed income securities. In case of a default, scheme may not fully receive the due amounts and NAV of the scheme may fall to the extent of default.
- **Spread Risk:** - Credit spreads on corporate bonds may change with varying market conditions. Market value of debt securities in portfolio may depreciate if the credit spreads widen and vice –versa. Similarly, in case of floating rate securities, if the spreads over the benchmark security / index widen, then the value of such securities may depreciate.
- **Liquidity Risk:** - Liquidity condition in market varies from time to time. In an environment of tight liquidity, necessity to sell securities may have higher than usual impact cost. Further, liquidity of any particular security in portfolio may lessen depending on market condition, requiring higher discount at the time of selling.
- **Counterparty Risk:** - This is the risk of failure of counterparty to a transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Scheme in case of a counterparty default.
- **Re-investment Risk:** - Investment in fixed income securities carries re-investment risk. Interest rates prevailing on the coupon payment or maturity date may differ from the purchase yield of the security. This may result in final realized yield to be lower than that expected at the time of purchase.

Risks envisaged and Mitigation measures for repo transactions : -

- (i) Counterparty Risks - Risks could arise if the Counterparty does not return the security (in a borrowing transaction) as contracted or pay interest (lending transaction) on the due date. This risk is largely mitigated, as the choice of counterparties is ‘restricted’ and their credit ratings and overall credit risk levels are taken into account before entering into such transactions.
 - (ii) Settlement Risks - Operational risks are lower as such trades are settled on a DVP (Delivery versus Payment – Safe settlement) basis. The trades are settled on a bilateral basis in the OTC segment.
 - (iii) Collateral / Credit Risk - In the event of the scheme being unable to pay back the money to the Counterparty as contracted, the counter party may dispose of the assets (as they have sufficient margin) and the net proceeds if any after such disposal may be refunded to the scheme. The value of the collateral will be monitored on a daily basis and shortfalls if any will lead to demand on the counterparty to top up collateral. In ability to comply with top up requests could lead to liquidation of security / collateral and an early / premature termination of the agreement.
- The Scheme at times may receive large number of redemption requests, leading to an asset-liability mismatch and therefore, requiring the investment manager to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments.

Risks associated with unrated instruments: - Investments in unrated instruments are subject to the risk associated with investments in any other fixed income securities, as referred above. However, investments in unrated instruments are considered to be subject to greater risk of loss of principal and interest than rated instruments.

Due to lock in requirements under the ELSS Guidelines, in case of the death of the unit holder, the nominee/legal heir, as the case may be, shall be able to redeem units only after the completion of one year, or at any time thereafter, from the date of allotment of units to the deceased unit holder.

3. Risks associated with segregated portfolio

- Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.
- Security comprising of segregated portfolio may not realise any value
- Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

4. Risks associated with investing in Tri-Party Repo through CCIL (TREPS)

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. CCIL maintains prefunded resources in all the clearing segments to cover potential losses arising from the default member. In the event of a clearing member failing to honor his settlement obligations, the default Fund is utilized to complete the settlement. The sequence in which the above resources are used is known as the “Default Waterfall”. As per the waterfall mechanism, after the defaulter’s margins and the defaulter’s contribution to the default fund have been appropriated, CCIL’s contribution is used to meet the losses. Post utilization of CCIL’s contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

5. Risk factors associated with processing of transaction through Stock Exchange Mechanism:

The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognised stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing/settlement, etc. upon which the Fund has no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s).

6. Risk on Right to limit redemption:

Subject to the approval of Board of Directors of the AMC and Trustee Company and immediate intimation to SEBI, a restriction on redemptions may be imposed by the Scheme under certain exceptional circumstances, which the AMC / Trustee believe that may lead to a systemic crisis or event that constrict liquidity of most securities or the efficient functioning of markets (subject to lock in period, if any). Please refer to the paragraph “Right to Limit Redemptions” for further details.

7. Risks associated with investment in mutual fund units:

Investment in units of Mutual Fund scheme involves investment risks such as, but not limited to, trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal. The value of units of mutual fund scheme may fluctuate based on the price / value / interest rates of the underlying securities in which the mutual fund scheme invests. The value of underlying securities may be affected, inter-alia, by changes in market environment, interest rates, changes in credit rating, trading volumes, settlement periods and transfer procedures. The NAV is also exposed to price/interest rate risk and credit risk and may be affected inter-alia, by the counterparty’s ability or willingness to meet its contractual obligations, government policy, volatility and liquidity in the money markets and pressure on the exchange rate of the rupee. Investment in units of mutual fund scheme is also exposed to risk of suspension of subscriptions / redemptions of the units, change in fundamental attributes etc. Since the Scheme may invest in schemes of Mutual Funds, scheme specific risk factors of each such mutual fund scheme will be applicable to the Scheme portfolio.

C. Risk Mitigation Strategies:

The Fund by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in equity and debt markets. The risk control process involves identifying & measuring the risk through various risk measurement tools.

The Fund has identified following risks of investing in equity and debt and designed risk management strategies, which are embedded in the investment process to manage such risks.

Nature of Risk	Risk Mitigation Measures by AMC
For making investment in equity schemes	
<p>Liquidity Risk: Trading volumes, settlement periods and transfer procedures may restrict the liquidity of underlying investments.</p>	<p>All trades are executed on the two leading exchanges, the NSE and BSE. The internal investment process incorporates the days required to sell as an important criteria for investment decisions. The fund seeks to control such risk by investing in such stocks having strong fundamentals, sound financial strength and superior quality of management and highly liquid papers. Further, the days required to liquidate an investment is actively monitored by our internal systems. This ensures that the liquidity risk in the portfolio is minimized.</p>
<p>Settlement Risk: Different segments of Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Schemes to make intended securities' purchases due to settlement problems could cause the Schemes to miss certain investment opportunities.</p>	<p>The portfolio invests only in stocks listed on the BSE and/or the NSE. Both these exchanges are regulated by SEBI. The counterparty risk and settlement risk for all trades on the NSE is guaranteed by the National Securities Clearing Corporation Ltd. (a wholly owned subsidiary of the NSE); and by the Trade Guarantee Fund of BSE. Fixed income investments for equity schemes are limited to highly liquid money market instruments and used only as a cash management tool. Therefore, this minimizes the settlement risk in the portfolio.</p>
<p>Volatility Risk: Equity securities and equity related securities are volatile and prone to price fluctuations on a daily basis.</p>	<p>The schemes has a diversified portfolio to counter the volatility in the prices of individual stocks. Diversification in the portfolio reduces the impact of high fluctuations in daily individual stock prices on the portfolio.</p>
For making investment in fixed income and money markets	
<p>Credit Risk: Debt securities are subject to the risk of an issuer's inability to meet principal and interest payments on the obligations.</p>	<p>The fund has a strong credit research process. The credit team analyses and approves each issuer before investment by the schemes. There is a regulatory and internal cap on exposure to each issuer. This ensures a diversified portfolio and reduced credit risk in the portfolio.</p>
<p>Liquidity Risk: The corporate debt market is relatively illiquid vis-à-vis the government securities market. Even though the government securities market is more liquid compared to that of other debt instruments, on occasions, there could be difficulties in transacting in the market due to extreme volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through.</p>	<p>The schemes are envisaged to be actively managed portfolios. The liquidity and volatility of a security are important criteria in security selection process. This ensures that liquidity risk is minimized.</p>
<p>Investing in unrated securities: Lower rated or unrated securities are more likely to react to developments affecting the market and the credit risk than the highly rated securities which react primarily to movements in the general level of interest rates. Lower rated securities also tend to be more sensitive to economic conditions than higher rated securities.</p>	<p>The schemes have a strong credit research process and as such all investments, rated or unrated, are analyzed and approved by the credit team before investment by the schemes. Further there is a regulatory and internal cap on exposure to unrated issuers, limiting exposure to unrated securities.</p>

<p>Settlement Risk: Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested and no return is earned thereon.</p>	<p>The AMC has well laid out processes and systems, which mitigate operational risks attached with the settlement process.</p>
<p>Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Plans are reinvested. The additional income from reinvestment is the “interest on interest” component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.</p>	<p>Reinvestment risk is an inherent feature of the portfolio management process. It may be managed, to a certain extent, by seeking to invest in securities with relatively low intermittent cash flows.</p>

Position of Debt Market in India

The Indian debt market, one of the largest in Asia, is developing rapidly buoyed by a multitude of factors including new instruments, increased liquidity, deregulation of interest rates and improved settlement systems. The major players in the Indian debt markets today are banks, financial institutions, insurance companies, pension funds, provident funds and mutual funds. The instruments in the market can be broadly categorized as those issued by corporates, banks, financial institutions and those issued by state/central governments. The risks associated with any investments are - credit risk, interest rate risk and liquidity risk. While corporate papers carry credit risk due to changing business conditions, government securities carry zero credit risk. Interest rate risk is present in all debt securities and depends on a variety of macroeconomic factors. The largest segment of the Indian Debt market consists of the Government of India securities where the daily average trading volume is in excess of around Rs.

50,000 crores, with instrument tenors ranging from short dated Treasury Bills to long dated securities extending upto 50 years. The Corporate bond market, though relatively less liquid, is also fast developing with an increased participation from the banks, financial institutions, mutual funds, provident funds, insurance companies and corporate treasuries. Public Financial Institutions, Public Sector Undertakings and Private AAA Corporates are the major issuers. Corporate bonds majorly are issued as fixed rate bonds. The yield curve usually tends to be positive sloping i.e. yield of shorter dated securities being lower than that of longer dated ones.

The money markets in India essentially consist of call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at specified price), Tri-Party Repo, commercial papers (CPs, short term unsecured promissory note, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). A predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates.
